

THE NEW YORK PUBLIC LIBRARY

A tool is provided for separating a first circuit board and a second circuit board to prevent the damage thereof. In one aspect of the invention the tool includes a piston assembly and a handle. A first blade and second blade are coupled between the handle and the piston assembly. The first blade and the second blade are normally biased outwardly. The handle has a first position and a second position relative to the piston assembly. In the first position the blades are biased outwardly and in the second position the piston assembly biases the blades inwardly to engage the first circuit board.
